

SAKSHAM PANDEY

+91-7651894673 saksham5701@gmail.com linkedin.com/in/saksham-pandey github.com/saksham-pandey

Technical Skills

Languages: Java, C++, Python, Scala, JavaScript, Node.js
Backend & APIs: Spring Boot, REST APIs, gRPC, Microservices, FastAPI, Synchronous/Asynchronous Design Patterns
Distributed Systems: Apache Kafka, RabbitMQ, Event-driven Architecture, Message Queues
Databases: PostgreSQL (pgvector), MySQL, Oracle, MongoDB, Redis, ScyllaDB
Testing & Quality: JUnit, Mockito, TestNG, Unit Testing, CI/CD, Code Reviews
DevOps & Cloud: AWS, Docker, Kubernetes, OpenShift, Jenkins, Prometheus, Grafana, Git
AI/ML: HuggingFace, LangGraph, LangChain, PyTorch, RAG Systems
Agile Tools: JIRA, Confluence, Scrum Methodologies

Experience

Software Development Engineer

Jun 2024 – Present

Ola

Bengaluru, India

- Architected internet-scale backend services processing **50M+ events/day** using Kafka, applying synchronous REST APIs and asynchronous event streaming for **125M+ users** with 99.9% uptime
- Developed MCP server integration for Krutrim AI enabling multi-turn conversation management using FastAPI and event-driven architecture
- Engineered low-latency Offer Engine with Redis caching, improving engagement by 12% through real-time personalized delivery
- Optimized P99 latency by 30% through performance profiling, query tuning, and bottleneck analysis across microservices
- Led zero-downtime cloud migration using blue-green deployment, reducing infrastructure costs by 15%
- Maintained **85%+ test coverage** using JUnit/Mockito with automated CI/CD in Jenkins and rigorous code reviews
- Built internal developer tooling and reusable Spring Boot templates, reducing service bootstrap time by 40%

Software Engineering Intern

Jan 2024 – May 2024

Ola

Bengaluru, India

- Built real-time user segmentation pipeline using Kafka Streams processing 10M+ events daily with sub-second latency
- Implemented distributed caching with Redis, reducing database load by 60% and improving response times to 80ms (P95)

Projects

AI-Powered GitHub Code Analysis & Documentation Platform | Python, FastAPI, LangGraph, pgvector 2024

- Built intelligent system enabling natural language querying over GitHub repositories using LLM-powered semantic search with RAG
- Implemented vector embedding pipeline with HuggingFace stored in PostgreSQL pgvector for efficient similarity search and PRD generation
- Designed multi-agent workflow with LangGraph for automated role-specific documentation and interactive repository Q&A

Distributed Job Scheduler with Rate Limiting | Java, Spring Boot, Kafka, Redis

2023

- Architected fault-tolerant scheduling system supporting delayed execution, automatic retries, and distributed coordination
- Established event-driven workflows using Kafka with idempotent consumers ensuring exactly-once execution semantics
- Implemented Redis-based distributed locking and token-bucket rate limiting to protect downstream services

Education

Jaypee University of Engineering and Technology

2020 – 2024

Bachelor of Technology in Computer Science – GPA: 8.0/10.0

Guna, India

Achievements

Solved 500+ DSA problems in C++ and Java with focus on algorithms and design patterns; experienced with CI/CD pipelines, agile scrum, test-driven development, and production monitoring using Prometheus and Grafana
